#### **NEW QUESTION: 1**

You need to optimize SRV1.

What configuration changes should you implement? To answer, select the appropriate option from each list in the answer area.

#### **Answer:**

Explanation:

Explanation

From the scenario: SRV1 has 16 logical cores and hosts a SQL Server instance that supports a mission-critical application. The application has approximately 30,000 concurrent users and

relies heavily on the use of temporary tables.

Box 1: Change the size of the tempdb log file.

The size and physical placement of the tempdb database can affect the performance of a system. For example, if the size that is defined for tempdb is too small, part of the system-processing load may be taken up with autogrowing tempdb to the size required to support the workload every time you restart the instance of SQL Server. You can avoid this overhead by increasing the sizes of the tempdb data and log file.

Box 2: Add additional tempdb files.

Create as many files as needed to maximize disk bandwidth. Using multiple files reduces tempdb storage contention and yields significantly better scalability. However, do not create too many files because this can reduce performance and increase management overhead. As a general guideline, create one data file for each CPU on the server (accounting for any affinity mask settings) and then adjust the number of files up or down as necessary.

Topic 2, Contoso, Ltd Case Study 2Background

You are the database administrator for Contoso, Ltd. The company has 200 offices around the world. The company has corporate executives that are located in offices in London, New York, Toronto, Sydney, and Tokyo.

Contoso, Ltd. has a Microsoft Azure SQL Database environment.

You plan to deploy a new Azure SQL Database to support a variety of mobile applications and public websites.

The company is deploying a multi-tenant environment. The environment will host Azure SQL Database instances. The company plans to make the instances available to internal departments and partner companies.

Contoso is in the final stages of setting up networking and communications for the environment.

Existing Contoso and Customer instances need to be migrated to Azure virtual machines (VM) according to the following requirements:

The company plans to deploy a new order entry application and a new business intelligence and analysis application. Each application will be supported by a new database. Contoso creates a new Azure SQL database named Reporting. The database will be used to support the company's financial reporting requirements. You associate the database with the Contoso Azure Active Directory domain.

Each location database for the data entry application may have an unpredictable amount of activity. Data must be replicated to secondary databases in Azure datacenters in different regions. To support the application, you need to create a database named contosodb1 in the existing environment.

Objects

Database

The contosodb1 database must support the following requirements:

Application

For the business intelligence application, corporate executives must be able to view all data in near real-time with low network latency.

Contoso has the following security, networking, and communications requirements:

**NEW QUESTION: 2**

You are the project manager of HJT project. You want to measure the operational effectiveness of risk management capabilities. Which of the following is the BEST option to measure the operational effectiveness?

- A. Key performance indicators
- B. Metric thresholds
- C. Key risk indicators
- D. Capability maturity models

**Answer: A**

Explanation:

Explanation/Reference:

Explanation:

Key performance indicators are a set of quantifiable measures that a company or industry uses to gauge or compare performance in terms of meeting their strategic and operational goals. Key performance indicators (KPIs) provide insights into the operational effectiveness of the concept or capability that they monitor.

Incorrect Answers:

A: Key risk Indicators (KRIs) only provide insights into potential risks that may exist or be realized within a concept or capability that they monitor.

B: Capability maturity models (CMMs) assess the maturity of a concept or capability and do not provide insights into operational effectiveness.

D: Metric thresholds are decision or action points that are enacted when a KPI or KRI reports a specific value or set of values.

**NEW QUESTION: 3**

Refer to the exhibit.

The exhibit illustrates the exchange of VPN route and label information between MPLS VPN inter-AS. The exhibit also shows ASBRs exchanging VPN-IPv4 addresses.

Which command is needed to change the next-hop address when ASBR2 is not configured?

- A. Redistribute command with the BGP routing process
- B. Redistribute command with connected
- C. Redistribute command with static
- D. Redistribute command with the IGP routing process

**Answer: B**

#### Explanation:

Figure 11-3 illustrates the exchange of VPN route and label information between autonomous systems. The only difference is that ASBR2 is configured with the redistribute connected command, which propagates the host routes to all PEs. The redistribute connected command is necessary because ASBR2 is not configured to change the next hop address.
