 Pass Guaranteed ISQI - CMAPFL-TE - CMAP Mobile App Testing - Foundation Level (worldwide) Perfect Latest Test Simulations
It is better than CMAPFL-TE dumps questions, Flexibility to choose the number of questions in the CMAPFL-TE Question Bank, While, when facing the CMAPFL-TE actual test, do you prepare well for it?

Implementing ISQI Azure Infrastructure Solutionsâ€• is the [CMAP Mobile App Testing - Foundation Level (worldwide)](#) name of iSQI Other Certification, ISQI Specialist exam dumps which covers all the knowledge points of the real ISQI exam.

You may always complain that time is limited for you on account of school work or work pressure, Our CMAPFL-TE exam questions have a high quality, It is small probability event.

NEW QUESTION: 1
A DHCP configured router is connected directly to a switch that has been provisioned with DHCP snooping. IP Source Guard with the ip verify source port-security command is configured under the interfaces that connect to all DHCP clients on the switch. However, clients are not receiving an IP address via the DHCP server. Which option is the cause of this issue?
A. The DHCP client interfaces have storm control configured.
B. DHCP snooping must be enabled on all VLANs, even if they are not utilized for dynamic address allocation.
C. The DHCP server does not support information option 82.
D. Static DHCP bindings are not configured on the switch.
Answer: C
Explanation:
Explanation/Reference:
Explanation:
When you enable both IP Source Guard and Port Security, using the ip verify source port-security interface configuration command, there are two caveats:
The DHCP server must support option 82, or the client is not assigned an IP address.

The MAC address in the DHCP packet is not learned as a secure address. The MAC address of the

DHCP client is learned as a secure address only when the switch

receives non-DHCP data traffic.

NEW QUESTION: 2
A company plans to implement an HTTP-based API to support a web
app. The web app allows customers to check the status of their
orders.
The API must meet the following requirements:
* Implement Azure Functions
* Provide public read-only operations
* Do not allow write operations
You need to recommend configuration options.
What should you recommend? To answer, configure the appropriate
options in the dialog box in the answer area.
NOTE: Each correct selection is worth one point.

Answer:
Explanation:

Explanation

Allowed authentication methods: GET only
Authorization level: Anonymous
The option is Allow Anonymous requests. This option turns on
authentication and authorization in App Service, but defers
authorization decisions to your application code. For
authenticated requests, App Service also passes along
authentication information in the HTTP headers.
This option provides more flexibility in handling anonymous
requests.
